CentOS Installation

Step1: Open Virtual Box

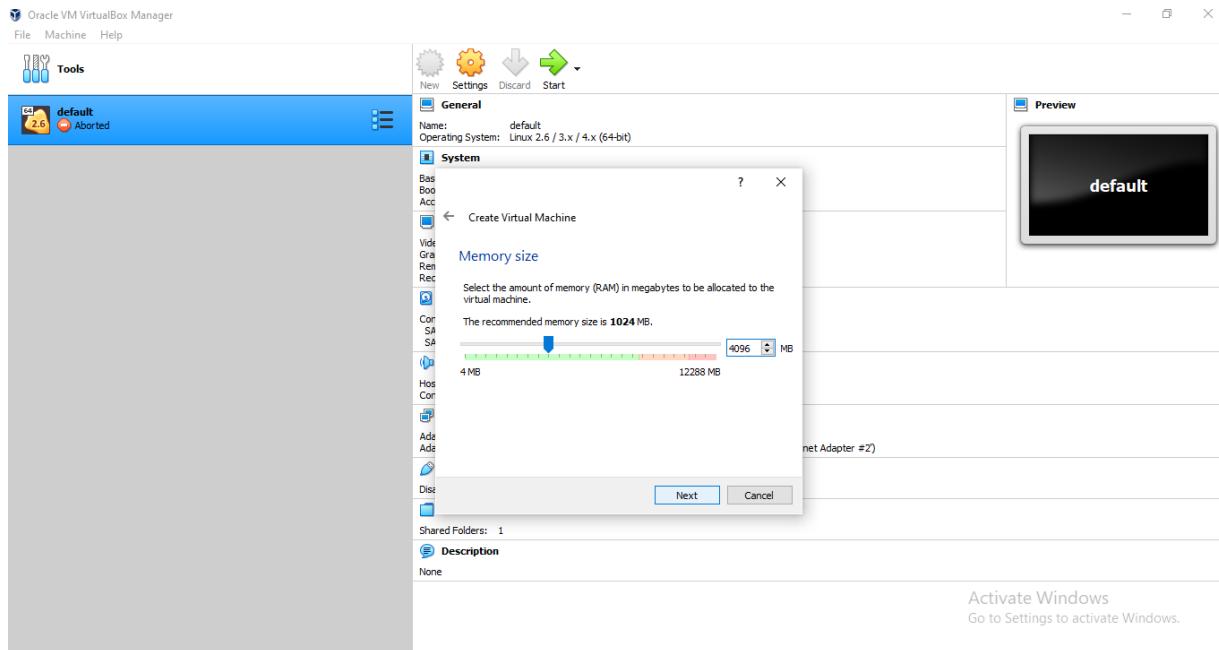

Step 2: Click on New Icon to create a Virtual Machine.

Enter the name as **centos** and click on Next as prompted on screen.

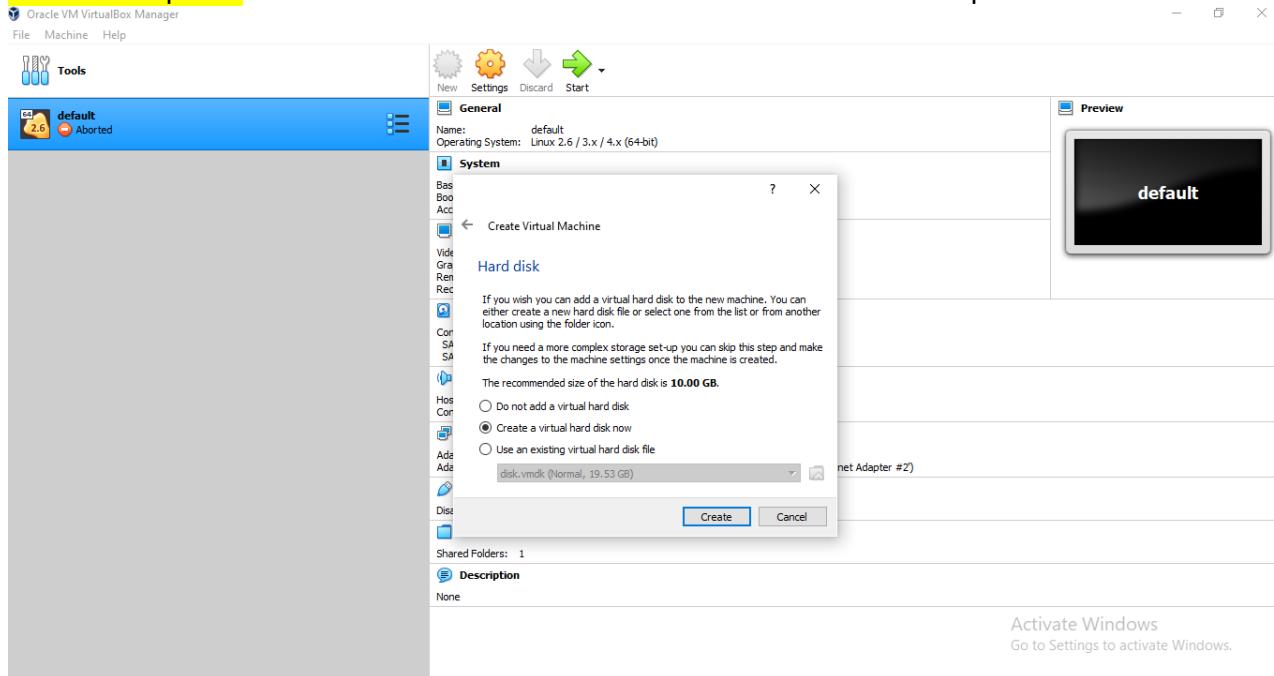

CentOS Installation

Enter the **RAM** size for your Virtual Machine. (Recommended size is 4GB—4096 MB)
Then Click on **Next** to proceed.

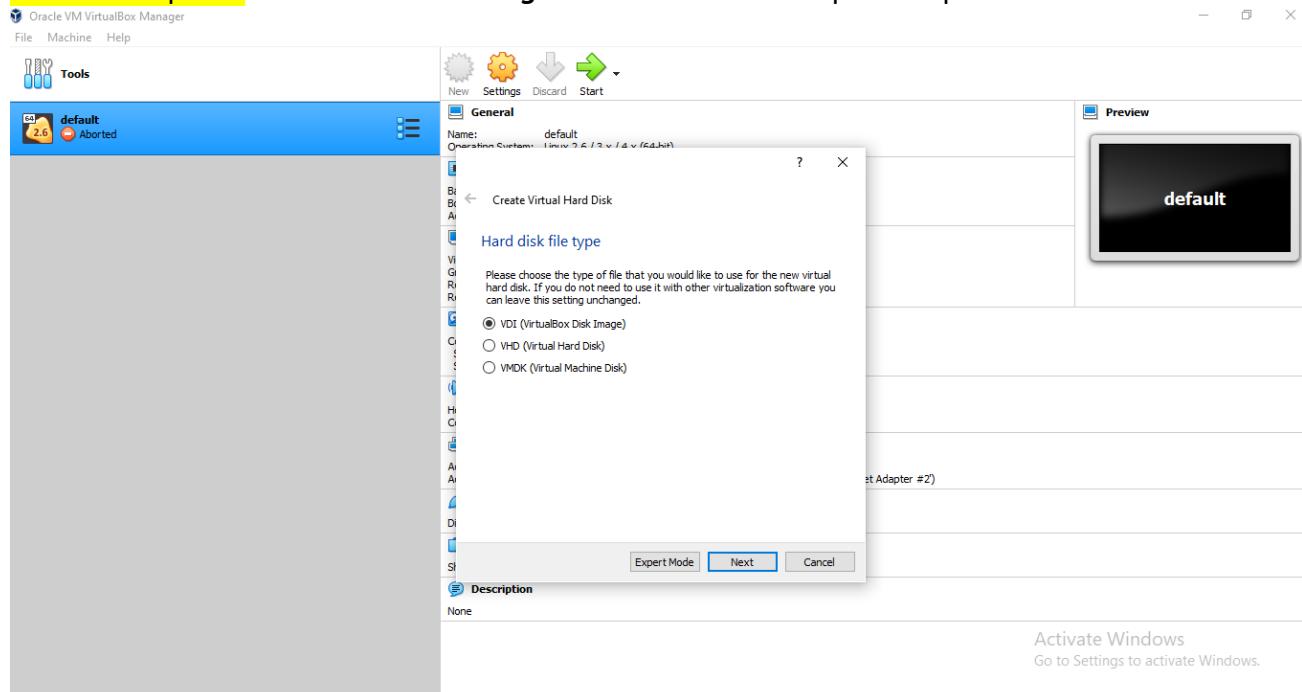

Select the Option: **Create a virtual hard disk now.** Then click on Create to proceed.

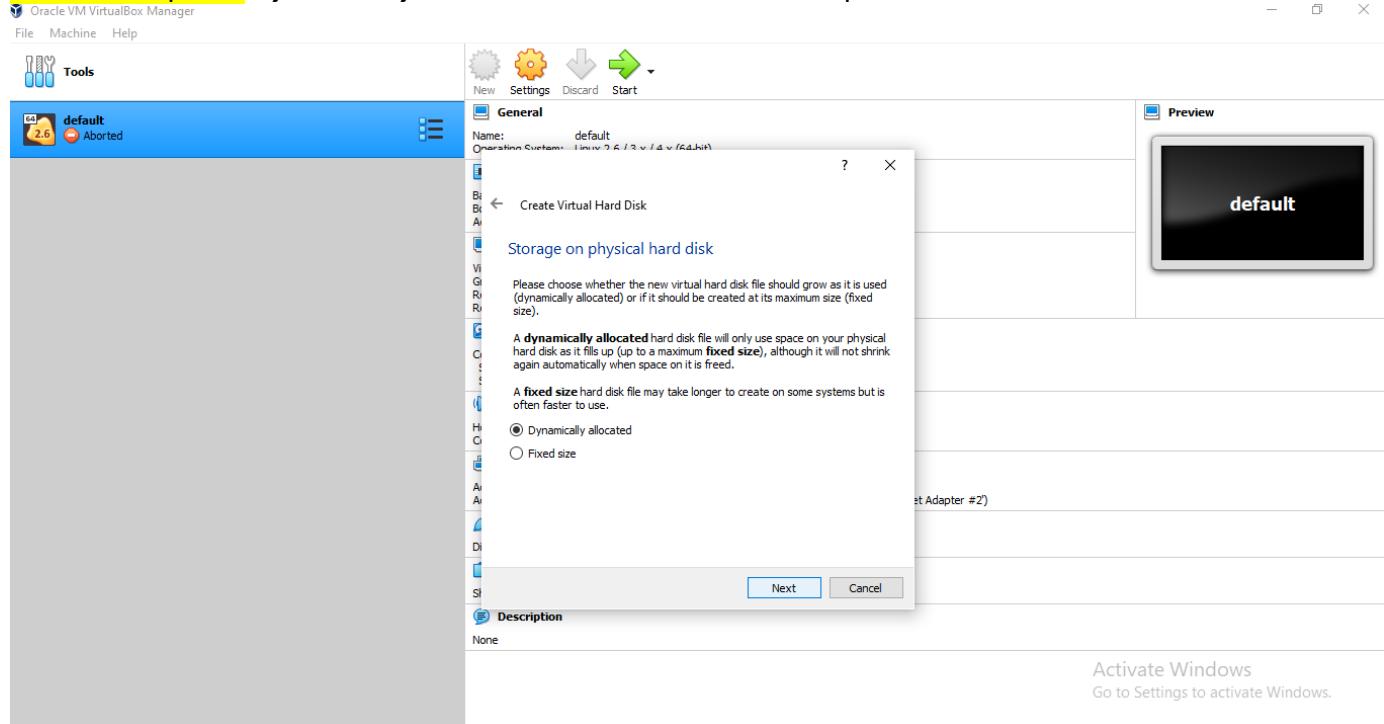

CentOS Installation

Select the Option: **Virtual Box Disk Image**. Then click on Next option to proceed.

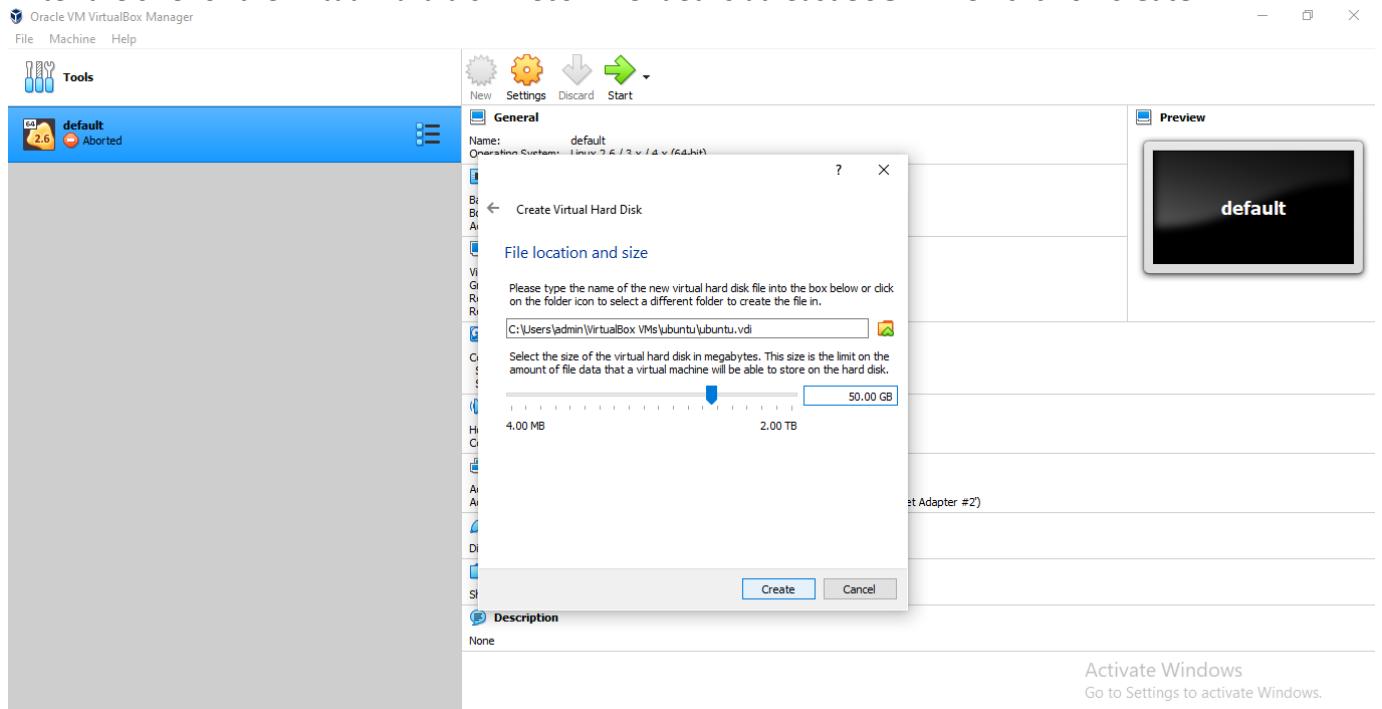

Select the Option: **Dynamically allocated**. Then click on **Next** to proceed.

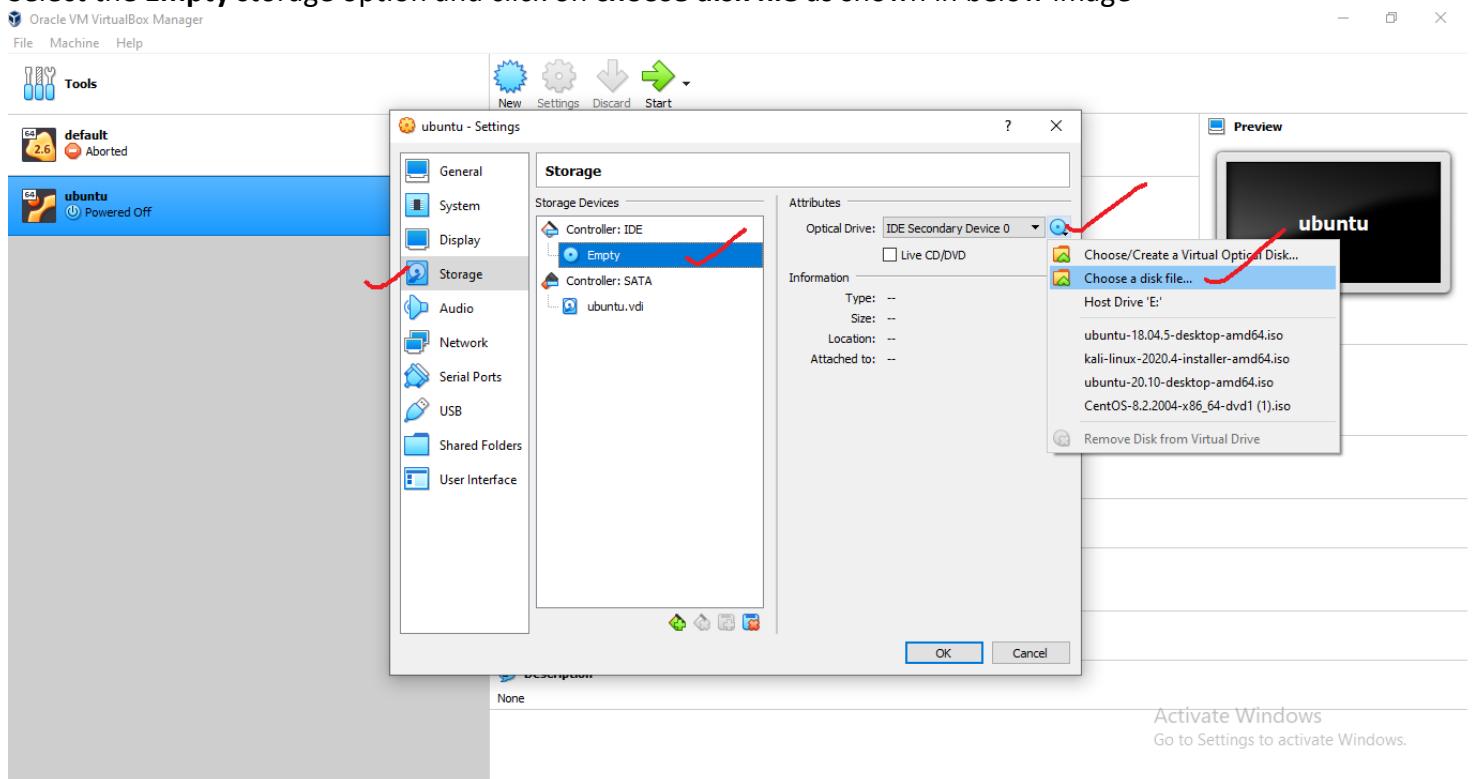

CentOS Installation

Enter the size for the virtual hard disk. Recommended is at least **50GB**. Then click on **create**.

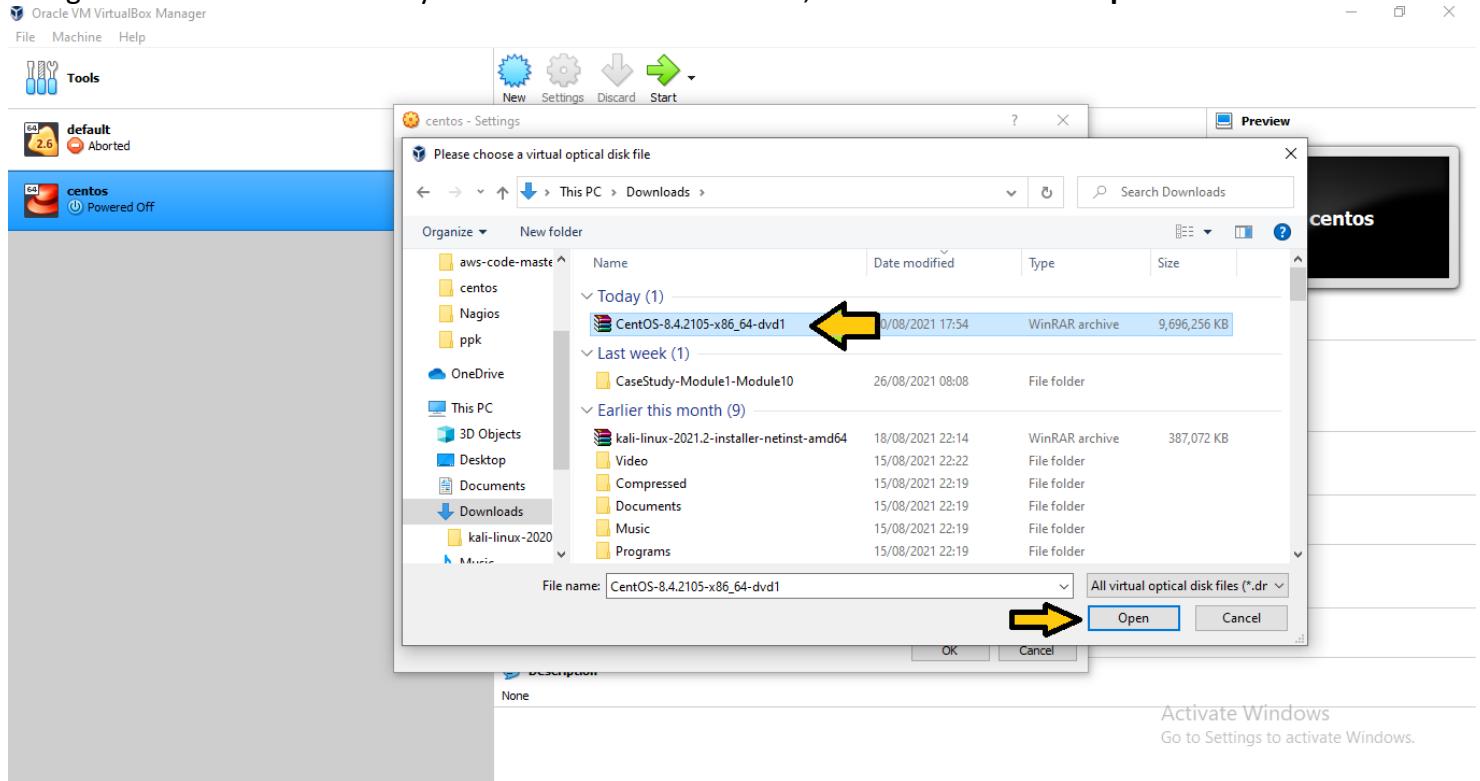

Now your virtual machine is added. Click on Setting Icon to add the disk file under Storage.

Select the **Empty** storage option and click on **choose disk file** as shown in below image

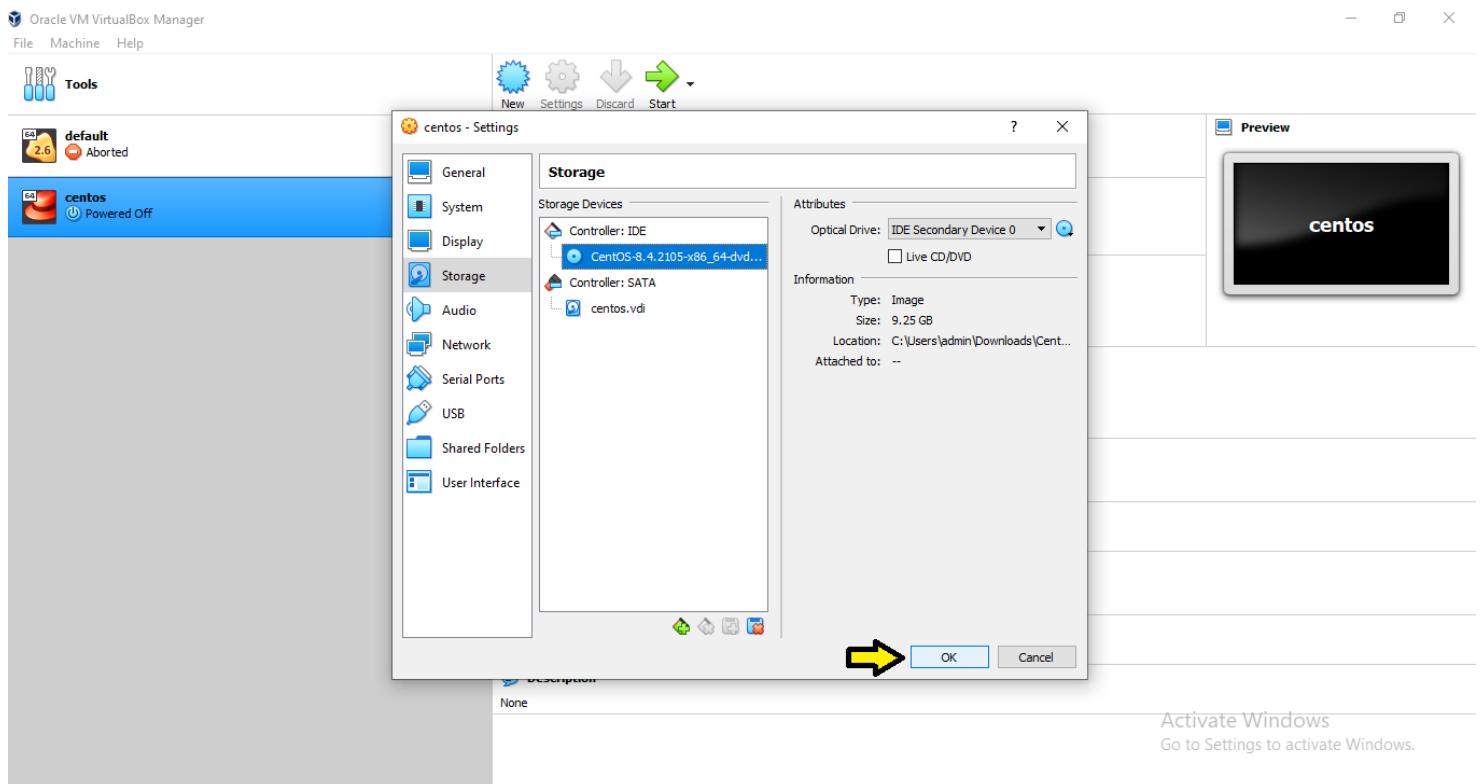

CentOS Installation

Navigate to the location where you have downloaded the file, select it and click on **Open**

Click on **OK** to proceed further.

CentOS Installation

Click on **Start** to start the VM.

Select your file when prompted and click on **Start** to start the CentOS Installation.

During the Installation, you have to choose

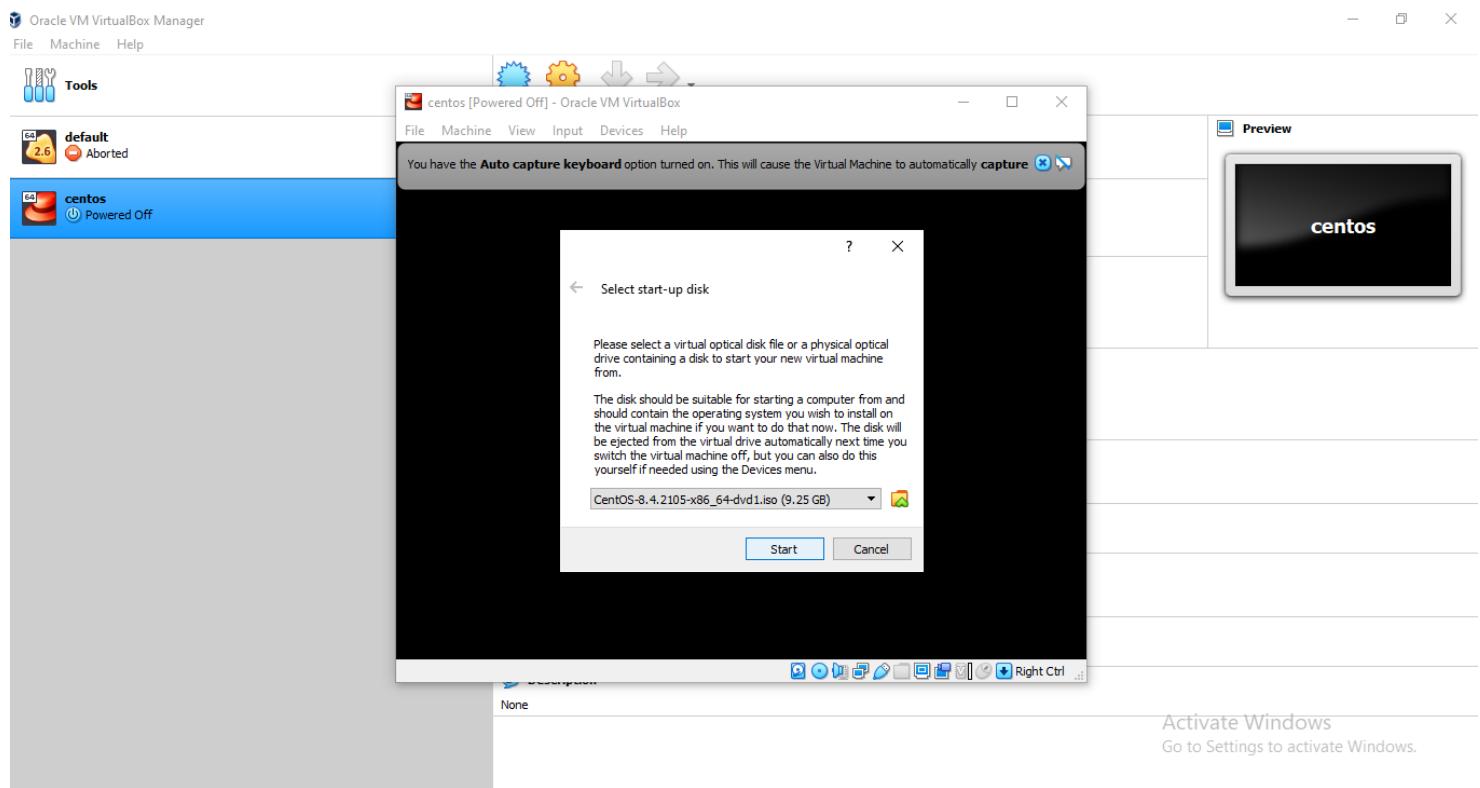

Language

Region (Time Zone)

Username and Password.

(Make sure you note them for root and the user you create for yourself).

Make sure you give yourself Admin Access while creating user

Note:

The VM will be ready for use once the installations finishes.
