## Linux Training

**Step1:** Search for **Centos 8 download** in your browser and click on **X86\_64** link as shown below.

Google search results for "centos 8 download". The first result is a link to the CentOS website. A yellow arrow points to the "X86\_64" link in the list of download options. Other links visible include "Documentation" and "More results from centos.org". The page also shows results for "The CentOS Project".

**Step2:** Use any of the following mirror links to get the Centos 8 iso file link.

The screenshot shows the CentOS homepage with a message about bandwidth conservation. It lists several mirrors for the specific version 8.4.2105. A yellow arrow points to the "Other mirrors further away:" section, which lists additional mirror URLs.

In order to conserve the limited bandwidth available, ISO images are not downloadable from mirror.centos.org

The following mirrors in your region should have the ISO images available:

- [http://centos.excellmedia.net/8.4.2105/isos/x86\\_64/](http://centos.excellmedia.net/8.4.2105/isos/x86_64/)

### Step3:

#### Note:-

1. You need to download the file with name **CentOS-8.4.2105-x86\_64-dvd1.iso** only.
2. As the size of the iso file is large(around 9GB), the download will take a minimum of 20-30 minutes
3. If the link is not responding or consuming much time for download, you can try with a different mirror link as shown in Step2

An example of Mirror Excel Media Link Index is as below.
